

TITAN DUAL-LEG VERTICAL LIFT

WITH HINGED LID OPENER AND FIXED TOP OPTIONS

TITAN LIFT

Elevate your flatscreen experience with the Titan Lift from Ultralift Australia. Designed to transform how televisions integrate into living spaces, Titan offers exceptional versatility with a refined, furniture-first aesthetic.

Smooth, Quiet Operation

At the heart of Titan is a precision-engineered lifting mechanism that delivers smooth, near-silent movement. Raise or lower your TV effortlessly to the ideal viewing height for a dynamic and comfortable entertainment experience.

Compact Design, Limitless Possibilities

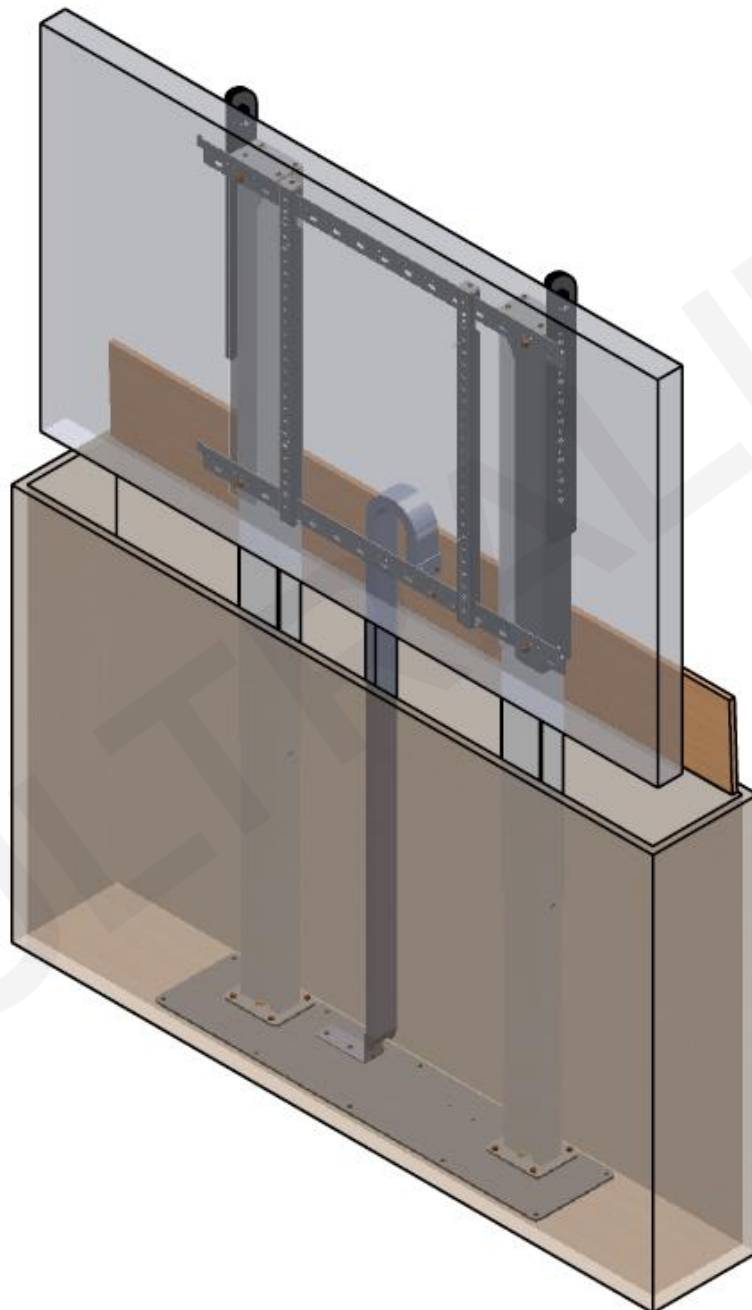

Titan's compact form allows your TV to be concealed within cabinetry, sideboards, custom joinery, or even floor installations. This flexible approach to TV placement enhances modern interiors while keeping technology discreetly out of sight when not in use.

Minimalist Style, Maximum Protection

Eliminate visible wiring and bulky stands. Titan creates a clean, minimalist look while also protecting your TV from accidental knocks, dust, and damage when concealed inside furniture.

Suits Flatscreens 46"–70" (and 75" with fixed lid only)

The Titan vertical lift system is designed to accommodate a wide range of flatscreen sizes, making it suitable for both intimate settings and larger viewing areas. For immersive viewing, our vertical TV lift system ensures a perfect fit for your entertainment needs.

**Cabinet/Joinery Not Included**

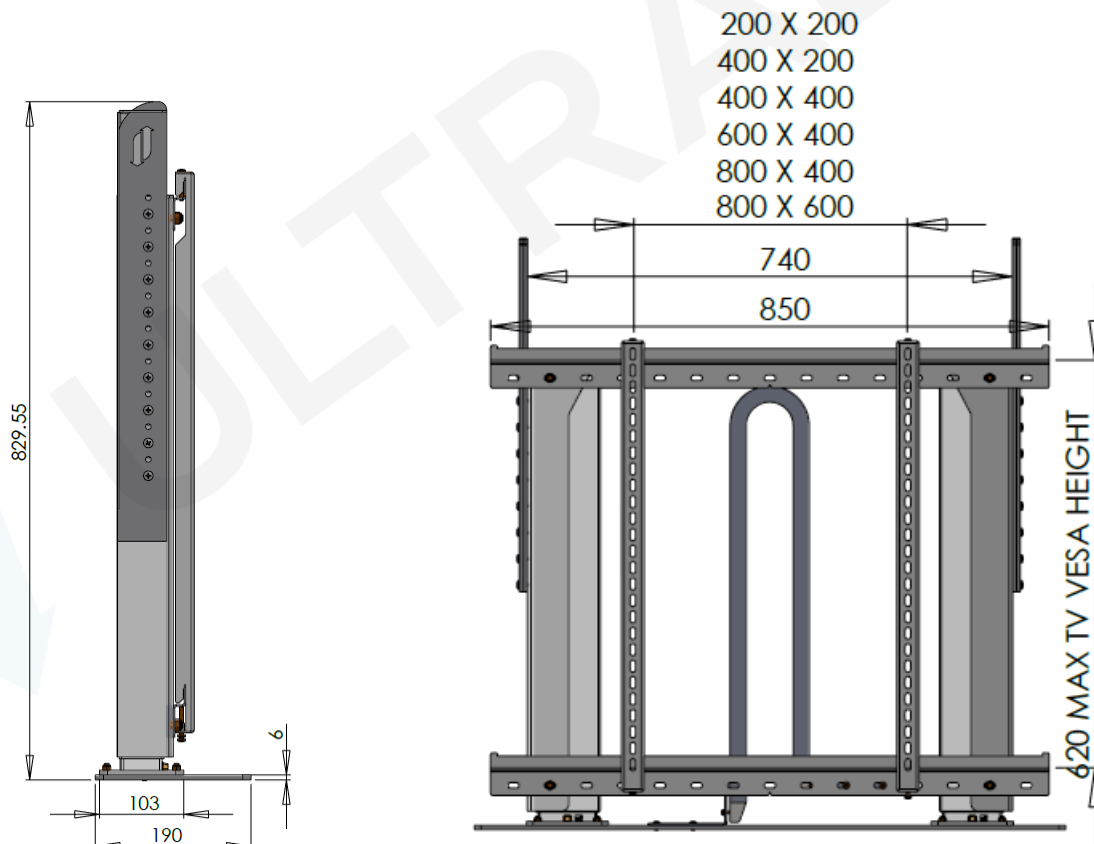

Please note: The Titan Dual Leg unit does not include the cabinet or any joinery. The cabinetry shown is for illustration purposes only. To complete your installation, we recommend engaging your local carpenter or cabinet maker to design and build the surrounding joinery to suit your space.

UNIT WEIGHT	40

* Other colours are available as per request.

** The hinged lid opener is only available for TVs smaller than 70 inches. Fixed lid available for 75" TVs

<MULTIPLE VESA MOUNTING CONFIGURATION>

PRODUCT INSTALLATION

- The **Cable Management** on the Titan uses an Energy Chain articulated cable management system. The Energy Chain will follow the movement of the Titan lift without causing crimping or crushing of cables.
- The **Control box** should be mounted inside the joinery and ensure that it can be easily accessed for maintenance.

We recommend maintaining front access to the lift within the joinery to allow for future servicing and maintenance.
